COMENTARIO GENERAL

Durante la presente semana las siguientes rúbricas han presentado:

* Un I.E. superior o igual a 1,25:
  Enfección gonocócica (1,93), Sífilis (1,40), Parotiditis (6,60).

* Un I.E. inferior o igual a 0,75:
  Disentería (0,33), F. tifoidea y paratifoidea (0,00), Enfermedad Meningocócica (0,67), Gripe (0,72), Tos Ferina (0,75), Brucelosis (0,22).

* Las restantes rúbricas han presentado una incidencia normal
  Hay que destacar 12 caso(s) de paludismo importado(s)

(1) Índice epidémico para una enfermedad dada es la razón entre los casos presentados en la semana correspondiente (o los casos acumulados hasta dicha semana si se trata de I.E. acumulado) y los casos que se esperan o preven (mediana del quinquenio anterior) para la misma semana. Si el valor del índice se encuentra entre 0,76 y 1,24 la incidencia se considera normal, si es menor o igual a 0,75 incidencia baja, si es mayor o igual a 1,25 incidencia alta. En enfermedades de baja incidencia este índice no es de utilidad dado que pequeñas oscilaciones en el número de casos producen grandes variaciones en dicho índice.
### ESTADO DE LAS ENFERMEDADES DE DECLARACIÓN OBLIGATORIA POR COMUNIDADES AUTÓNOMAS EN LA SEMANA 33 DE 2007
